

GENERAL DOCUMENTATION	DG-PO4-Rev1
Glass and chippable material policy	Applicable as of: 11/February/2020 There is no prior document

At present, all glass and all chippable material in our premises are identified and under control. Glass is duly identified by consecutive numbers (in black). All lamps set in the production area are protected by plastic material. UV tubes are numbered (in white) and are made with unshatter material.

All of them are controlled by a check list made according to a frequency established in order to prevent any accident. Should any employee require the use of eyeglasses, he/she will be duly trained for a proper operation in case eyeglasses are lost or cracked. All employees are trained to deal properly in case of a breakage of any glass or chippable material in the production area. In case any of these elements are partial or entirely broken, the Management will be notified immediately and a replacement will be performed at once.

There is available a procedure to deal with such events.
